Dexaltin

Dexaltin Oral Paste is a paste for application to the oral mucosa. The active ingredient, *dexamethasone* demonstrates superior anti-inflammatory action[1—2] on various oral lesions. *Sodium polyacrylate*, a synthetic base used in the formulation, shows excellent topical adhesiveness and spreading property on the wet oral mucosa[3]. These two ingredients work synergistically to promote rapid and more effective healing of various oral lesions without causing discomfort.

Dexaltin Oral Paste offers significant benefits over other oral pastes:

- **Proven superior adhesiveness to wet mucosa[3], hence a prolonged drug action**
- **Proven high anti-inflammatory activity[1-2]**
- **Smooth texture with excellent spreading property**
- **Odourless and tasteless**

- **Indication**

  Intractable stomatitis associated with erosion or ulceration.

- **Dosage**

  Apply 1 to several times daily. The dosage may be adjusted depending on the condition of the patient.
